PROFILE

Graduate student at Carnegie Mellon University, passionate about technology, life-long learning, and sports. Excels in Statistical Computing, with a strong foundation in data structures and algorithms.

EDUCATION

Carnegie Mellon University

Pittsburgh, PA

Master of Science in Applied Data Science

Expected May 2027

Relevant Fall 2026 Courses: Applied Linear Models, Statistical Computing, Data Visualization, Data Engineering, Statistical Methods in Finance

Relevant Spring 2027 Courses: Statistical Machine Learning, Time Series, Statistical Practicum (Corporate Capstone)

Middlebury College

Middlebury, VT

BA in Statistics

May 2026

Relevant Coursework: Statistical Consulting, Statistical Learning, Time Series Analysis, Bayesian Statistics, Probability, Statistical Inference, Linear Algebra, Multivariable Calculus

BA in Molecular Biology and Biochemistry

Relevant Coursework: Organic Chemistry, Biochemistry of Macromolecules, Molecular Genetics, Topics in Biotechnology, Future of RNA, Cell Biology

SKILLS

- **Programming Languages and Platforms:** R, RStudio, basic Python (NumPy, Pandas), SQL, Git
- **Machine Learning:** Regression, Classification, Clustering, Decision Trees, Statistical Learning
- **Functional Skills:** Collaboration, Oral and Written Communication, Agile Software Lifecycle Delivery Methodologies, Leadership, Stakeholder Management, Problem Solving Mentality
- **Domain Experience:** Life Sciences Research & Development, Data Analytics

EXPERIENCE

AI-SDM Fellow

Pittsburgh, PA

NSF AI Institute for Societal Decision Making (NSF AI-SDM)

September 2026 – Present

- Working in partnership with Meta AI for Good to understand population flux patterns in the aftermath of natural disasters.
- Building dynamic data visualizations to communicate actionable insights to emergency managers.
- One of two NSF AI-SDM Fellows chosen from CMU Master's of Applied Data Science students.

Student Consultant

Middlebury, VT

Middlebury Department of Mathematics & Statistics | Montana Natural Heritage Program

January 2026 - Present

- Analyzed 587,000+ acoustic detections across 123 Montana monitoring sites to characterize Hoary Bat migration patterns.
- Cleaned and integrated environmental data from NASA, Daymet, and Open-Meteo to develop predictive covariates.
- Developed and evaluated Generalized Additive Models (GAMs) with Negative Binomial regression and AIC-based model selection to identify seasonal and environmental drivers of bat activity.

Teaching Assistant

Middlebury, VT

Middlebury Department of Mathematics & Statistics

August 2025 – December 2025

- Supported students learning statistical modeling, machine learning, and data analysis by facilitating help sessions.
- Helped students develop proficiency with R and RStudio to implement methods such as classification, clustering, and tree-based models.
- Strengthened communication and mentoring skills by explaining complex statistical concepts in accessible ways and providing individualized support during coursework.

Research Assistant

Middlebury, VT

Middlebury Department of Mathematics & Statistics

May 2025 – August 2025

- Conducted analysis of LC–MS metabolic data using MS-Dial and R to identify metabolites with distinct behavioral patterns in the oral biome.
- Collaborated on an interdisciplinary study using my understanding of biochemistry and statistics, applying biostatistic algorithmic methods with the application of faster diagnosis.

Lab Assistant

Middlebury, VT

Middlebury Department of Chemistry

August 2024 – May 2025

- Identified essential catalyst in order to turn over chemical reaction that cleaves methyl group in oxygen-free conditions, findings to be submitted to academic journals.
- Enhanced communication skills by explaining complex chemical concepts and experimental design to a general audience during a schoolwide symposium.

ACADEMIC PROJECTS

Bayesian Text Analysis: Authorship of Federalist Papers

Fall 2026

- Developed a Bayesian statistical model using Negative Binomial regression and MCMC simulation to analyze textual data and identify features useful for authorship classification.

Position Flexibility in Premier League

Fall 2024

- Applied both unsupervised and supervised algorithms to determine whether Premier League players show affinities for other positions.

K-Nearest Neighbors NBA Player Classification

Spring 2024

- Used K-Nearest Neighbors (KNN) classification to predict NBA player height based on weight, draft year, and other player characteristics to examine positional trends over time.
